The Managing Director/CEO

SejFarms Consult Limited

Badagry, Lagos State

Dear Sir,

REVIEW OF EXPERIENCE AND APPRECIATION

Recall that the department reached out to you in the year 2023 with the request for placement of our penultimate-year students on your farm on the account of the Students Industrial Work Experience Scheme (SIWES). This was borne out of the facilities and activities sited on your farm, coupled with the testimony of a few other players in the aquaculture industry. Thus, you graciously approved our request. Thank you.

The students were sent with high expectations from the academic board of our department to see the practical impact of your activities on our students, which is very critical in boosting their interest and passion in aquaculture practices.

I am glad to convey appreciation to the academic board of the department for the good job you are doing with the students and other interns and trainees, as testified in the words of the students and their orientation. Indices of interest in fish farming, innovation in aquacultural practices, practical applications of knowledge and commitment to duties have always been observed in our students upon return from your farm after the period of Industrial Training. I must state here that the mix of culture systems, development and production of innovative fish products and practical involvement in food security and safety programs have been factors of pride the students always talk about. All these have been of great help to the students in their final year of study and especially in carrying out their final-year projects.

Thus, I would like to solicit your continuous support in building these students into formidable stakeholders of sustainable aquaculture, even by giving a chance to the willing ones after graduation.

Please be assured of our continuous commitment to the sustainability of this collaboration.

Thank you.

Dr. G. A. Ataguba
Ag. Head of Department
