LAGOS STATE UNIVERSITY OF SCIENCE & TECHNOLOGY
COLLEGE OF AGRICULTURE
DEPARTMENT OF FISHERIES AND AQUACULTURE

MD/CEO
SEJFARMS CONSULTS LIMITED

15TH OF NOVEMBER, 2024

Dear Sir,

RE: TESTIMONIAL ON PREVIOUS SIWES STUDENTS FROM LAGOS STATE POLYTECHNIC IKORODU.

In response to your letter on the request for review and testimonial from our department, we are pleased to respond to your request for review and testimonial about our legacy institution (LASPOTECH) students experience with the internship and training programs especially during their student industrial work experience (SIWES) and industrial training (IT).

Although the institution is now a university, our students that immensely benefited from your internship and training program are our legacy students (of Lagos State Polytechnic) who are either in their second year in school or that are through with their ND and needed to undergo industrial training before coming back for their HND.

Considering the nature of your organisation/farm, the department expects that our student would be exposed to practical knowledge in fisheries and aquaculture in areas such as fish production, hatchery production, fish nutrition, fish processing and management, fishing gear and craft technology e.t.c as well as the equipment/facilities (both local and modern) used during the process of learning.

Based on the report gotten from our students that came back from your farm, we are happy to say that we are impressed with their level of exposure on the areas mentioned above and we can boldly say that this affected their learning in a positive way.

Our students who came to your farm for their SIWES and IT came back with reports that they were exposed to the culture of fish species such as tilapia (*Oreochromis niloticus*) catfish (*Clarias gariepinus* and *Heteribranchus longifilis), Pangasius hypothalamus*, *Chrysichthys nigrodigitatus* and other new species that they've not seen physically before. Some of them also reported that

they now have practical experience on pond management such as harvesting of fish from large earthen ponds.

Report also showed that you have a modern processing and storage facility that you exposed our students to.

We notice an increase interest in the student attitude towards their course of study because of the exposure you gave to them and we hope that more students especially from the university will be opportune to have the same experience when they are sent to your farm.

We appreciate your efforts in making sure that our students get all the necessary knowledge needed and we hope to continue our partnership with you.

Thank you.

f.
